THE REPORT OF THE PROSPECTING ON THE CLAIMS, WHICH HAVE BEEN
GIVEN UP IN 1995 IN PASVIK, SØR-VARANGER-KOMMUNE, NORGE.

The claims, which have been given up in 1995 (App. 1):

Föllvatnet : 194,195,196/94
Båtvatnet : 197/94
Gjökåsen : 321,322,323/92
Nyrud : 300,301/92, 351/94
Gjeddeåsen- : 193,199,347,348,349,350,/94
Tangenfjellet
Tommavann : 486/88,198/94
Blankvann : 144,145/92
Römlingåsen : 254/87,197,198/88,317,320/92,345,346/94

The prospecting on the claims:

Föllvatnet 194,195,196/94
Båtvatnet 197/94
Gjökåsen 321,322,323/92

These claims were not prospected.

Nyrud 300,301/92,351/94 (App. 2,3)

According to geophysics this area was the most promising target. Beside two large, probably magnetic ultramafic deposits there is a smaller magnetic anomaly with a good conductor, dipping to south east. Before the area was reserved A/S Sulfidmalm drilled one hole on the place 71.916 N/87.450 E. The company has not sent the results to us, but obviously the hole was drilled out of the deposit and parallel to the dipping of it.

Gjeddeåsen-Tangenfjellet 193,199,347,348,349,350/94 (App. 4-9)

Here only geophysical prospecting was done. Rounded magnetic anomalies were found with weak conductors.

Tommavann 486/88, 198/94 (App. 10,11)

Geophysical prospecting was done here and anomalies were prospected by drilling on two places (68.600 N/84.100 E and 68.550 N/84.025 E). As the results it was found amphibolite with magnetite and graphite. A little higher gold-assays were found with some quartz-veins.

Blankvann 144,145/92 (App. 12,13)

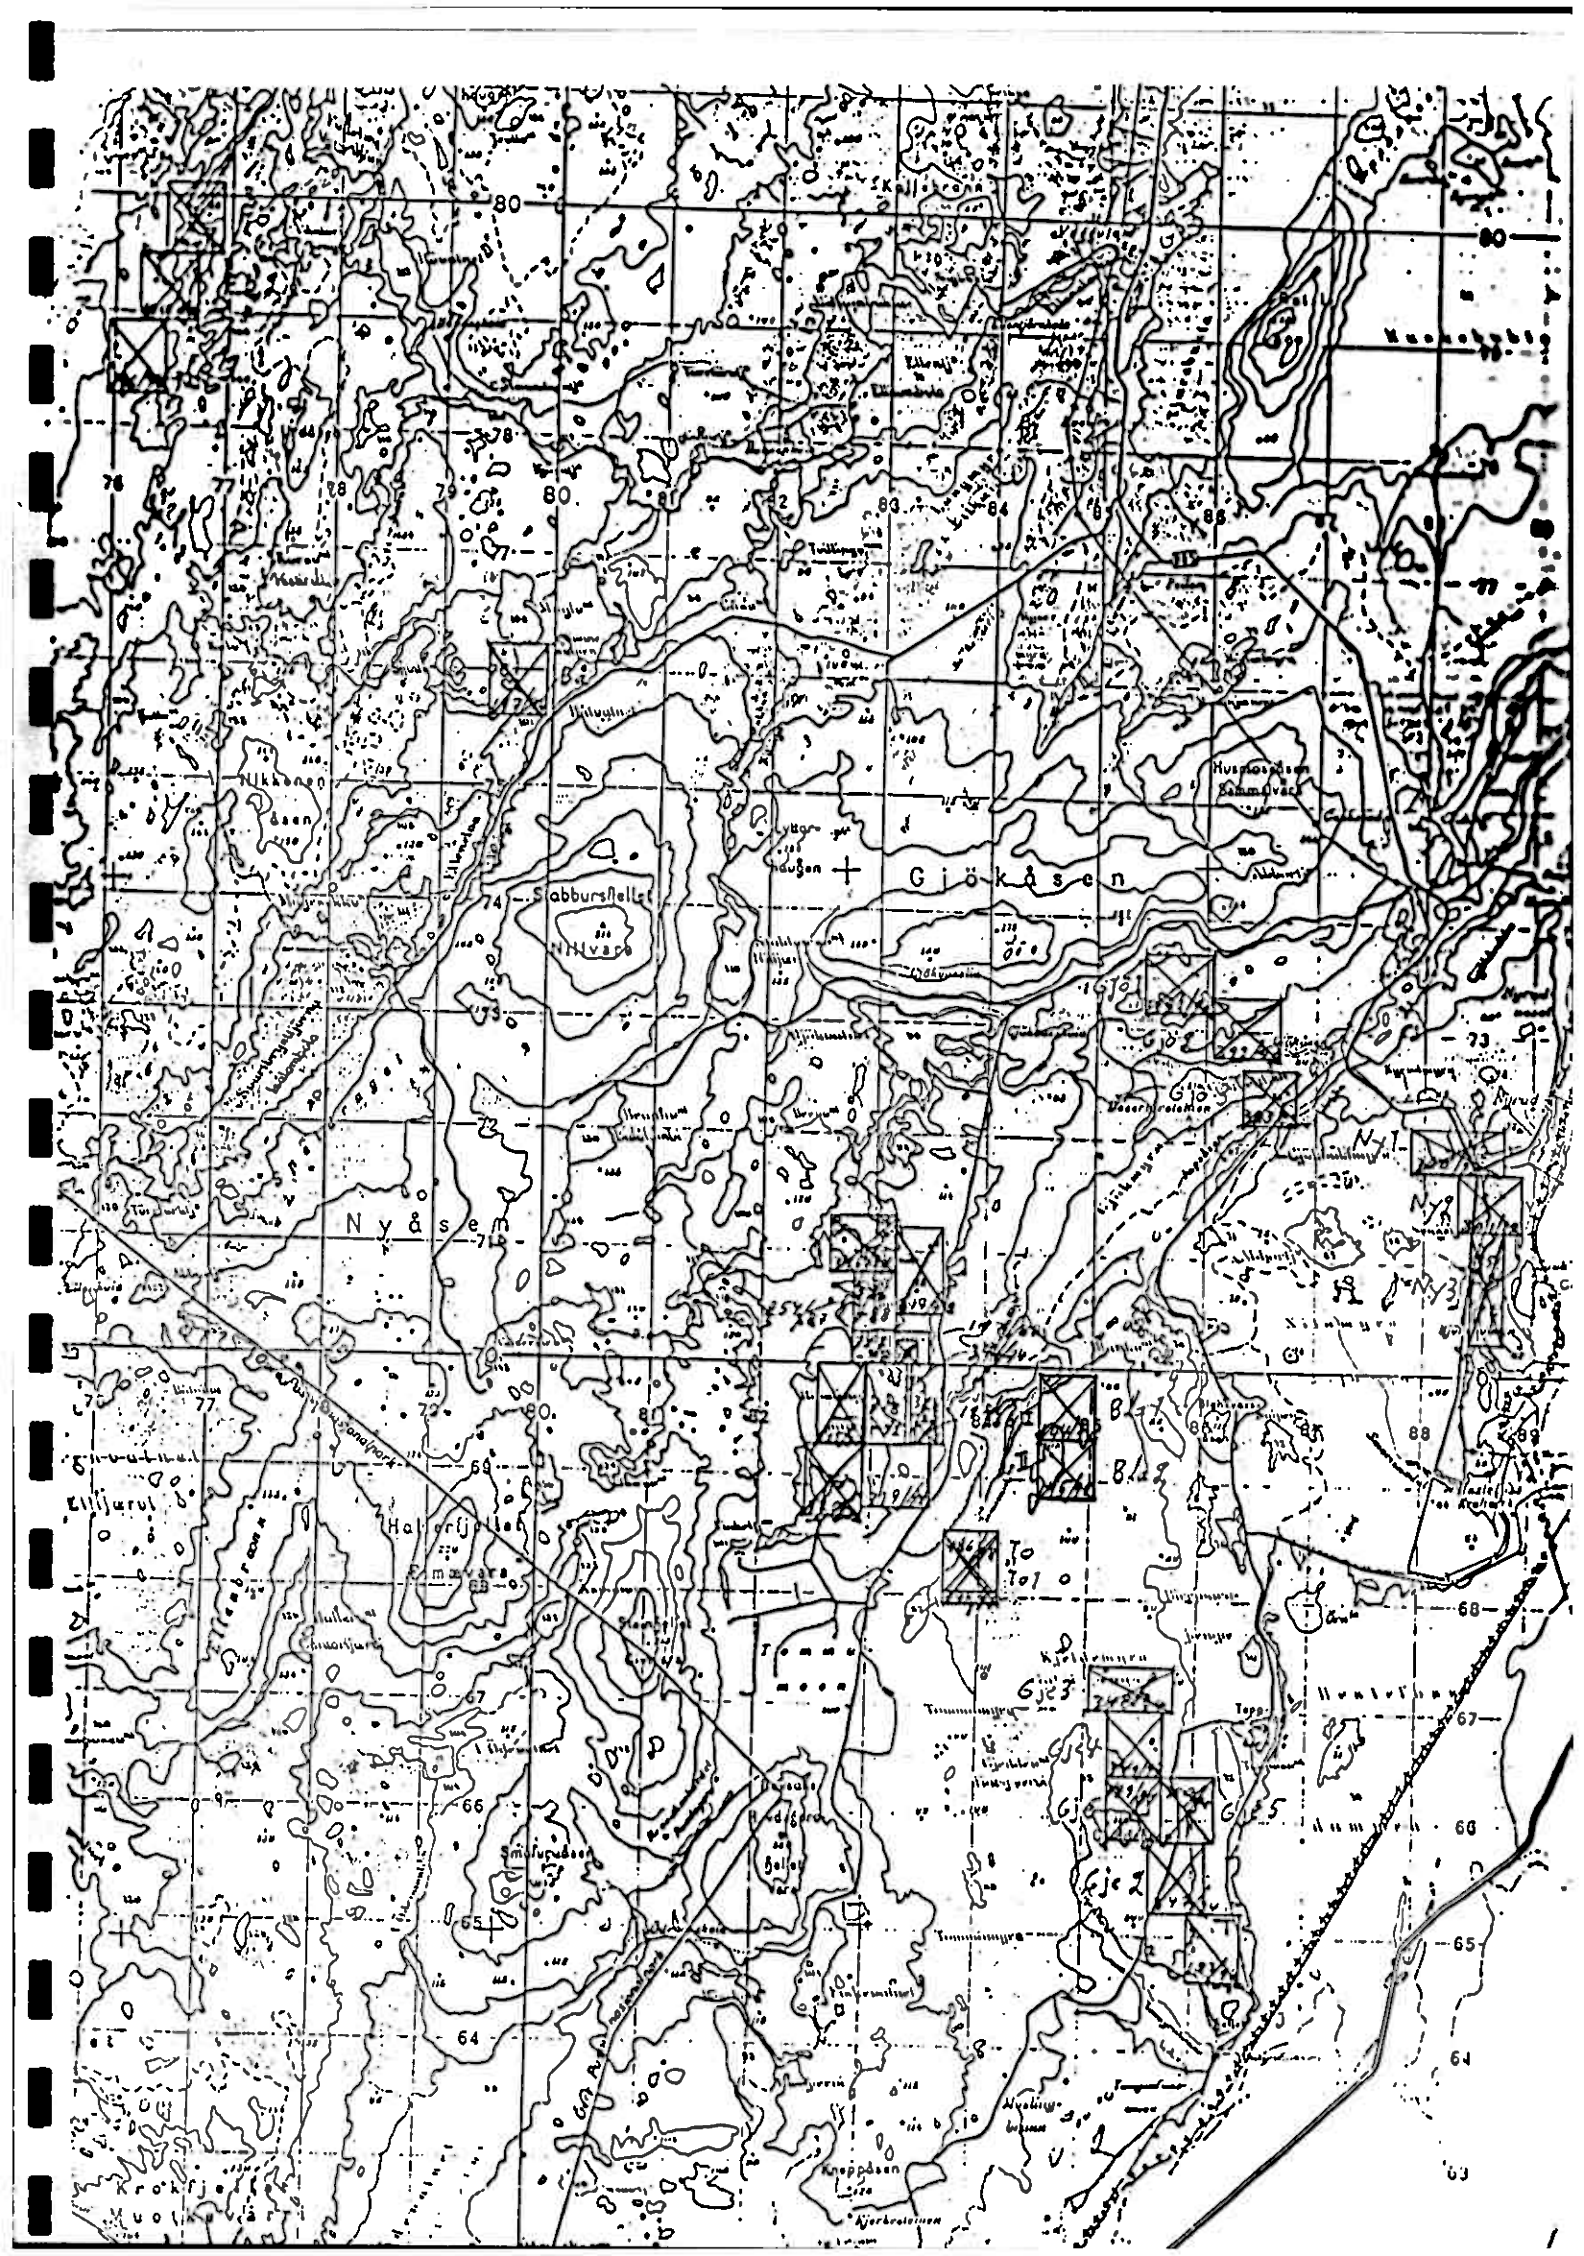

The area was prospected by geophysics, drilling and trenching. Magnetic anomalies in the area are caused by ultramafics.

Some Ni-Cu-bearing metaperidotite boulders were found on the surface and in trenches near the point 69.250 N/4.850 E. The drill-sites are 70.120 N/4.930 E and 70.010 N/4.840 E. The trenches were dug around 69.250 N/4.850 E.

Römlingåsen 254/87, 197,198/88, 317,320/92, 345,346/94. (App. 14-17)
Geophysical prospecting was done on all of these claims. The claims 254/87, 197,198/88 are overclaimed. One drillhole was drilled on the place 70.975 N/83.330 E. The geophysical anomalies were caused here by amphibolite with magnetite, graphite and some pyrite-bands.

Ivalo 7/5 1996
