 - BANDED GNEISS
 - CALCAREOUS SEDIMENTS
 - MICA SCHIST
- AGE
- 1 Early set of shallow dipping conjugate fractures. Associated to granitic intrusion. Moderately mineralized.
 - 2 Major steeply dipping fractures, often carrying remobilized mineralization.
 - 3 Minor steeply dipping fractures related to 2, often well mineralized.
 - 4 Major late fault system
 - 5 Splays and feather fractures, associated to 4.
- CALEDONIAN
- LATER THAN 3
- Au g/t
